ARGUS Demo Knowledge Base — Procurement & Inventory Snapshot

Document ID: KB-OPS-014 | Version: 2.0 | Snapshot date: 2026-09-28 | Owner: Supply Chain Operations

Dataset notice: All organizations, email addresses, products, identifiers, dates, and operational figures in this document are fictional and provided only for ARGUS testing.

Executive summary

This fictional snapshot is intended to help ARGUS estimate operational urgency. It contains planning estimates and open purchase-order information, not confirmed supplier commitments.

Inventory and order status

Component	On-hand units	Average daily use	Estimated cover	Open PO / due date	Status
NS-A7 accelerator	1,350	30	45 days	PO-7712: 900 units; 2026-10-24	Supplier confirmation pending
NS-C2 control module	2,400	40	60 days	PO-7720: 1,000 units; 2026-10-18	Acknowledged
PL-44 power IC	6,300	100	63 days	PO-7688: 4,000 units; 2026-10-20	Acknowledged
MC-10 controller	8,000	95	84 days	PO-7699: 3,000 units; 2026-10-29	Acknowledged

Scenario assumptions

• Forecast demand remains at the current average rate. • No safety-stock release or customer allocation change is assumed. • Inbound quantities are excluded from the cover calculation until receipt and quality inspection. • Cover figures can change if demand shifts or shipments are delayed.

Operational thresholds

Threshold	Trigger	Suggested response
Red	Less than 30 days of cover, or critical PO unconfirmed within 5 business days of due date	Daily supplier follow-up; validate customer allocation; prepare contingency options.
Amber	30–60 days of cover, or a single-source component has unresolved regulatory classification	Twice-weekly review; confirm PO and shipment milestones; request compliance review.
Green	More than 60 days of cover and qualified alternate available	Weekly monitoring; keep alternate qualification current.

Data quality / caveats

The 45-day NS-A7 figure is a planning estimate and may differ from the inventory dashboard because reserved stock is treated differently across reports. The dashboard owner must reconcile available-to-promise units before an executive decision. A purchase order is not proof that a shipment is legally authorized or physically unaffected.

Recommended next checks

1. Reconcile on-hand, reserved, and available-to-promise quantities for NS-A7. 2. Obtain written confirmation for PO-7712, including ship date and export documentation. 3. Ask Compliance to determine whether the component is covered by the official control text. 4. Model 15-, 30-, and 45-day delay scenarios.
