ARGUS Demo Knowledge Base — Supplier & Product Exposure Register

Document ID: KB-SUP-001 | Version: 1.3 | Effective date: 2026-09-30 | Owner: Strategic Procurement

Dataset notice: All organizations, email addresses, products, identifiers, dates, and operational figures in this document are fictional and provided only for ARGUS testing.

Purpose

This fictional internal register maps critical suppliers to products and identifies potential exposure to semiconductor export controls. It is designed as sample retrieval data for an ARGUS proof of concept; company names, products, and figures are illustrative.

Critical supplier mapping

Supplier	Country / site	Components supplied	Internal products	Dependency
Northstar Semiconductor Ltd.	Taiwan; assembly in Malaysia	Advanced compute accelerator NS-A7; control module NS-C2	Atlas Edge Server; Orion Analytics Appliance	NS-A7 is sole-sourced for Atlas Edge Server; NS-C2 has an approved alternate.
Pinnacle Logic Systems	South Korea	Power-management IC PL-44	Atlas Edge Server; Vega Storage Node	Dual-sourced; alternate lead time is 10 weeks.
Meridian Components Group	United States	General-purpose controller MC-10	Vega Storage Node	Low exposure to advanced-compute export controls; monitor classification.

Product-level exposure

Product	Critical component	Current inventory cover	Business consequence if unavailable
Atlas Edge Server	Northstar NS-A7 accelerator	45 calendar days at forecast demand	High: customer delivery commitments may slip; no qualified substitute currently approved.
Orion Analytics Appliance	Northstar NS-A7 accelerator	28 calendar days	High: production schedule may be interrupted.
Vega Storage Node	Pinnacle PL-44 / Meridian MC-10	63 calendar days combined component cover	Moderate: alternate sourcing is possible, subject to qualification.

Interpretation notes

1. Inventory-cover values are estimates based on the 2026-09-28 planning snapshot, not guaranteed availability. 2. Supplier country of incorporation does not by itself determine export-control applicability; assess item classification, origin, destination, end user, and the exact legal rule. 3. Northstar has not yet supplied a product-level classification certificate for NS-A7. 4. This register is internal planning data and must not be treated as a legal determination.

Known data gap

The register does not confirm whether NS-A7 falls within any newly announced control category. ARGUS should retrieve the applicable official notice and ask Compliance to validate classification before assigning a definitive exposure status.
